Future Next Steps

Intro & Proposal

- Team Cryvesto 3.0 constructs a LCA GUI for retail investors & fans to invest in their favorite entertainment themes, currently accessible to only HNW and IBs
- We believe that using FinTech we can bring a larger group to pool additional funds for financing and increase revenue streams by closely tracking market trends
- Able to attract a younger generation using new technology for their preferred investible entertainment

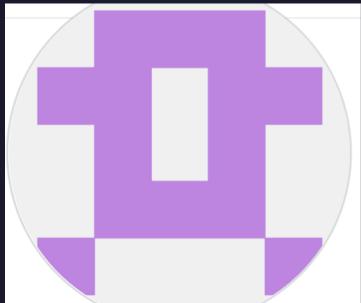

Executive Summary

A novel enterprise to develop investment opportunities through FTs & NFT smartcontracts for a multi-media production company.

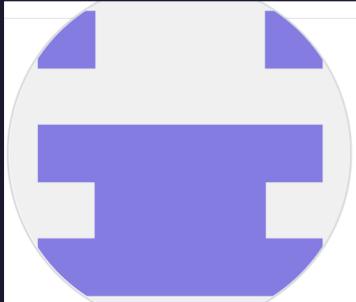

CryVesto PE provides an innovative approach to fund multi-media company "Light-Camera-Action"(LCA) to produce projects for theme centered fan entertainment

- Provide investment opportunities to both retail fans and HNW alike to defragment the global entertainment industry
- Utilizing our FinTech expertise we're providing a gateway to bring fans closer to their favorite artists and entertainment themes thru investment
- By attaching tangible IP assets with production projects value is quantifiable for both FTs in "BollyCoins" and NFTs

Lights Camera Action GUI using Streamlit

Lights-Camera-Action GUI

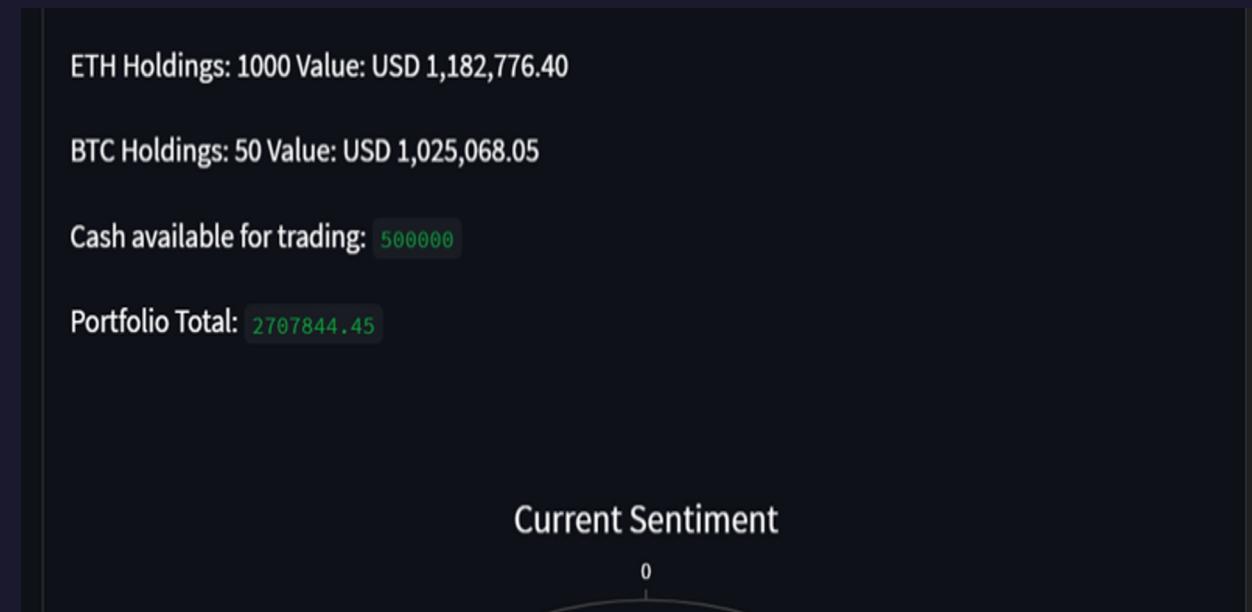

I. NFT Registration selection:

- to demonstrate the NFT/FT* registration process as well as, the creation of the campaign target

* FT is BollyCoin

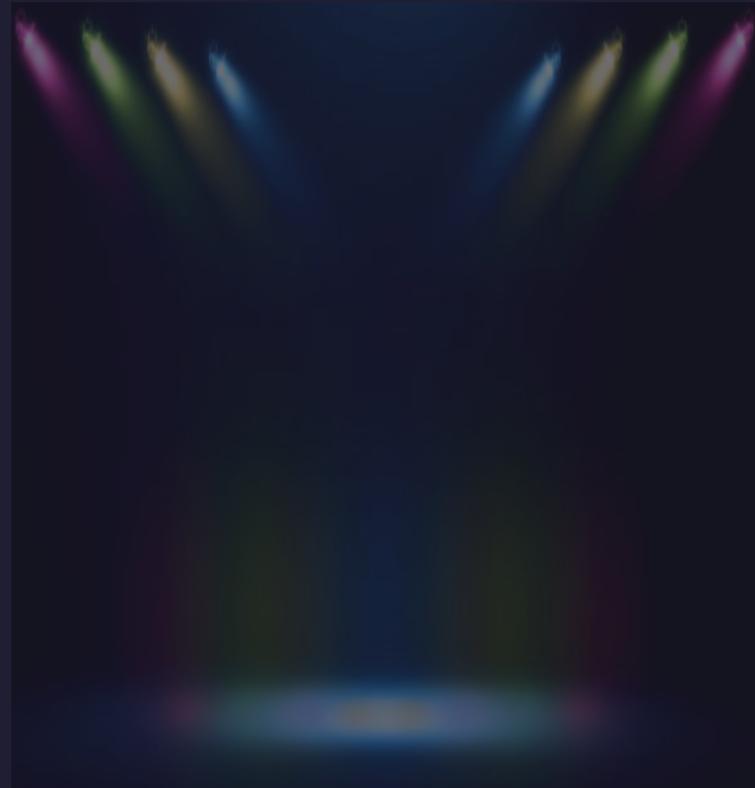

2. Movie Project selection:

- To demonstrate the investor side of selecting a movie project and choosing to invest in it

Techniques to Test & Evaluate Our Code

- Need for both Fungible tokens & NFTs
- ERC20 and 721 standards
- ERC 1155 standard for both types of tokens
- Inter Planetary File System (IPFS) utilized to store NFT images and metadata.
- ERC 2981 Royalties & dividends contracts and other apps were reviewed.

LCA's "BollyCoin" Token

Lights-Camera-Action Productions Inc. fungible token is the currency of the LCA ecosystem for investors and loyal fans to invest in production projects and make transactions with NFTs or withdrawals in their HD wallet.

Challenges Faced

- Lack of function availability in ERC1155 when compared to ERC20 and 721
- Unreliable Streamlit responses to Solidity Interface
- Lack of time to diagnose problems and resolve them

The Cryvesto Approach to Achieve Project Goals

- ❖ Backtested the models and compared Classification reports with Cumulative Returns
- ❖ Issues anticipated to tame the model
 - Placed strategic modifications in the signal coding
 - Backtested many trial runs with different configurations
 - Analyzed several Neural Network performance runs
 - Converted Classification Reports & Charts to pandas for efficiency and avoid the tedious backtesting process of changing parameters and recording

Summary

ERC2981 NFT Royalty Token standard

Optional Royalty payments

ERC4626 Token Vault Standard

Intrinsically interest-bearing tokens

Trades are executed at the best possible prices

EIP137 Domain Name Service

Trade names for NFTs and NFTs to avoid significant price changes before volatility increases in the marketplace

adding targeted security

A single global namespace for all names with a single ‘centralized’ resolver

Trades are executed at the best possible prices

Future Direction

- Finalize all the business details
- Functionality of business plan & technology integration
- Build working mvp and initiate funding round
